Registration of Professional Elective Courses from Verticals:

Professional Elective Courses will be registered in Semesters V and VI. These courses are listed in groups called verticals that represent a particular area of specialisation. Students are permitted to choose all Professional Electives from a particular vertical or from different verticals. Further, only one Professional Elective course shall be chosen in a semester horizontally (row-wise). However, two courses are permitted from the same row, provided one course is enrolled in Semester V and another in semester VI.

The registration of courses for B.E./B.Tech (Honours) or Minor degree shall be done from Semester V to VIII. The procedure for registration of courses explained above shall be followed for the courses of B.E/B.Tech (Honours) or Minor degree also. For more details on B.E./B.Tech (Honours) or Minor degree refer to Regulations 2021 Clause 4.10.

PROGRESS THROUGH KNOWLEDGE

Enrollment for B.E. / B. Tech. (Honours) / Minor degree (Optional)

A student can also optionally register for additional courses (18 credits) and become eligible for the award of B.E./B.Tech. (Honours) Minor degree.

For B.E. / B. Tech. (Honours), a student shall register for the additional courses (18 credits) from semester V onwards. These courses shall be from the same vertical or a combination of different verticals of the same programme of study only.

For minor degree, a student shall register for the additional courses (18 credits) from semester V onwards. All these courses have to be in a particular vertical from any one of the other programmes, Moreover, for minor degree the student can register for courses from any one of the following verticals also.

Complete details are available in clause 4.10 of Regulations 2021.

VERTICALS FOR MINOR DEGREE (In additions to all the verticals of other programmes)

| Vertical I Fintech and Block Chain | Vertical II Entrepreneurship | | Vertical IV Business Data Analytics | Vertical V Environment and Sustainability |
|---|--|--|--|--|
| Financial Management | Foundations of Entrepreneurship | Principles of Public Administration | Statistics For Management | Sustainable infrastructure Development |
| Fundamentals of Investment | Team Building & Leadership Management for Business | Constitution of India | Datamining For Business Intelligence | Sustainable Agriculture and Environmental Management |
| Banking, Financial Services and Insurance | Creativity & Innovation in Entrepreneurship | Public Personnel Administration | Human Resource Analytics | Sustainable Bio Materials |
| Introduction to Blockchain and its Applications | Principles of Marketing Management For Business | Administrative Theories | Marketing And Social Media Web Analytics | Materials for Energy Sustainability |
| Fintech Personal Finance and Payments | Human Resource Management for Entrepreneurs | Indian Administrative System | Operation And Supply Chain Analytics | Green Technology |
| Introduction to Fintech | Financing New Business Ventures | Public Policy Administration | Financial Analytics | Environmental Quality Monitoring and Analysis |
| - | - | - | - | Integrated Energy Planning for Sustainable Development |
| - | - | - | - | Energy Efficiency for Sustainable Development |

(Choice of courses for Minor degree is to be made from any one vertical of other programmes or from anyone of the following verticals)

MA3356

DIFFERENTIAL EQUATIONS

L T P C 3 1 0 4

9+3

9+3

OBJECTIVES :

- To acquaint the students with Differential Equations which are significantly used in engineering problems
- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To acquaint the knowledge of various techniques and methods of solving ordinary differential equations.
- To understand the knowledge of various techniques and methods of solving various types of partial differential equations.
- To understand the finite methods for time dependent partial differential equations.

UNIT I ORDINARY DIFFERENTIAL EQUATIONS

Higher order linear differential equations with constant coefficients – Particular integrals: Operator methods, Method of variation of parameters, Methods of undetermined coefficients– Cauchy's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS

Formation of partial differential equations – Singular integrals -- Solutions of standard types of first order partial differential equations - Lagrange's linear equation -- Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.

UNIT III NUMERICAL METHODS FOR ORDINARY DIFFERENTIAL EQUATIONS 9+3 Explicit Adams-Bashforth Techniques, Implicit Adams-Moulton Techniques, Predictor-Corrector Techniques, Finite difference methods for solving two-point linear boundary value problems, Orthogonal Collocation method.

UNIT IV FINITE DIFFERENCE METHODS FOR ELLIPTIC EQUATIONS 9+3 Laplace and Poisson's equations in a rectangular region: Five point finite difference schemes, Leibmann's iterative methods, Dirichlet and Neumann conditions – Laplace equation in polar coordinates: finite difference schemes.

UNIT V FINITE DIFFERENCE METHOD FOR TIME DEPENDENT PARTIAL DIFFERENTIAL EQUATION

9+3

TOTAL : 60 PERIODS

Parabolic equations: explicit and implicit finite difference methods, weighted average approximation -Dirichlet and Neumann conditions – First order hyperbolic equations – method of characteristics, different explicit and implicit methods; Wave equation: Explicit scheme- Stability of above schemes.

OUTCOMES:

Upon successful completion of the course, students will be able to:

- Apply various methods of solving differential equation which arise in many application problems.
- Understand how to solve the given standard partial differential equations.
- Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.
- Solve the partial and ordinary differential equations with initial and boundary conditions by using certain techniques with engineering applications.
- Familiar with various methods to solve time dependent partial differential equations.

CH3301

BASIC MECHANICAL ENGINEERING

OBJECTIVE

• To impart knowledge on thermodynamics and thermal engineering power generating units such as engines and theory of machines

UNIT I LAWS OF THERMODYNAMICS

Basic concepts and hints; Zeroth law; First Law of Thermodynamics - Statement and application; Steady flow energy equation-problems- Second law of Thermodynamics – Kelvin - Plank statement and Clausius statement- problems; Limitations; Heat Engine, Refrigerator and Heat Pump, Available energy, Third law of Thermodynamics - Statement.

UNIT II HEATING AND EXPANSION OF GASES

Expressions for work done, Internal energy and heat transfer for Constant Pressure, Constant Volume, Isothermal, Adiabatic and Polytropic processes-Derivations and problems; Free expansion and Throttling process.

UNIT III AIR STANDARD CYCLES

Carnot cycle; Stirlings cycle; Joule cycle; Otto cycle; Diesel cycle; Dual combustion Cycle-Derivations and problems.

UNIT IV I.C. ENGINES, STEAM AND ITS PROPERTIES AND TEAM

Engine nomenclature and classification; SI Engine; CI Engine; Four Stroke cycle, Two stroke cycle; Performance of I.C.Engine; Brake thermal efficiency; Indicated Thermal Efficiency, Specific fuel consumption.

Steam - Properties of steam; Dryness fraction; latent heat; Total heat of wet steam; Dry steam; Superheated steam. Use of steam tables; volume of wet steam, volume of superheated steam; External work of evaporation; Internal energy; Entropy of vapour, Expansion of vapour, Rankine cycle. Steam turbines – Impulse and Reaction types - Principles of operation.

UNIT V SIMPLE MECHANISM, FLY WHEEL, DRIVES AND BALNCING

Definition of Kinematic Links, Pairs and Kinematic Chains; Flywheel-Turning moment Diagram; Fluctuation of Energy. Belt and rope drives; Velocity ratio; slip; Creep; Ratio of tensions; Length of belt; Power Transmitted; gear trains-types. Balancing of rotating masses in same plane; Balancing of masses rotating in different planes.

TOTAL: 45 PERIODS

q

q

9

9

L T P C 3 0 0 3

OUTCOME

Students should learn thermodynamics and thermal engineering to understand the principles behind the operation of thermal equipments like IC engines and turbines etc., Students should be able to appreciate the theory behind operation of machinery and be able to design simple mechanisms

TEXT BOOKS

- 1. Nag, P.K., "Engineering Thermodynamics", IInd Edition, Tata McGraw Hill Publishing Co., Ltd., 1995

CH3302

MECHANICS OF SOLIDS

OBJECTIVE:

The students will be able to design the support column, beams, pipelines, storage tanks and reaction columns and tanks after undergoing this course. This is precursor or for the study on process equipment design and drawing.

UNIT I STRESS, STRAINAND DEFORMATION OF SOLIDS

Rigid bodies and deformable solids - forces on solids and supports - equilibrium and stability strength and stiffness - tension, compression and shear stresses - Hooke's law and simple problems - compound bars - thermal stresses - elastic constants and poission's ratio.

UNIT II TRANSVERSE LOADING ON BEAMS

Beams -support conditions-types of Beams -transverse loading on beams-shear force and bending moment in beams-analysis of can tilevers, simply - supported beams and over hanging beams relationships between loading, S.F. and B.M.Inbeams and their applications- S.F.& B.M. diagrams.

UNIT III **DEFLECTIONS OF BEAMS**

Double integration method – Macaulay's method – Area – moment theorems for computation of slopes and deflections in beams.

STRESSES IN BEAMS UNIT IV

Theory of simple bending – assumptions and derivation of bending equation (M/I=F/Y= E/R)analysisofstressesinbeams-loadscarryingcapacityofbeams-proportioningbeam sections - leaf springs - flitched beams - shear stress distribution in beams - determination of shear stress in flanged beams.

LTPC 3 0 0 3

q

UNIT V TORSIONAND COLUMNS

Torsion of circular shafts – derivation of torsion equation $(T/J = fs/R = C\theta/L)$ – stress and deformation in circular and hollow shafts – stresses and deformation in circular and hollow shafts–stepped shafts – shafts fixed at both ends– stresses inhelical springs–deflection of springs–spring constant. Axially loaded short columns–columns of unsymmetrical sections– Euler's theory of long columns – critical loads for prismatic columns with different end conditions – effect of eccentricity.

OUTCOME:

• Solve the problems related to the structural components under various loading conditions

TEXT BOOKS:

- 1. Junarkar, S. B., Mechanics of Structure Vol.1, 21st Edition, Character Publishing House, Anand, Indian, (1995).
- 2. William A.Nash, Theory and Problems of Strength of Materials, Schaum's Outline Series.

| CH3351 | CHEMICAL PROCESS CALCULATIONS | LTPC |
|------------|--|------|
| | | 3003 |
| OBJECTIVE: | the second second prime in the second s | |

 To acquire knowledge on laws of chemistry and its application to solution of mass and energy balance equations for single and network of units and introduce to process simulators.

UNIT I

Base and derived Units - Composition of Mixture and solutions - calculations of pressure, volume and temperature using ideal gas law. Use of partial pressure and pure component volume in gas calculations, applications of real gas relationship in gas calculation.

UNIT II

Stoichiometric principles, Application of material balance to unit operations like distillation, evaporation, crystallisation, drying etc., - Material balance with chemical reaction - Limiting and excess reactants - recycle - bypass and purging - Unsteady state material balances.

UNIT III

Calculation of absolute humidity, molal humidity, relative humidity and percentage humidity - Use of humidity in condensation and drying - Humidity chart, dew point.

UNIT IV

Heat capacity of solids, liquids, gases and solutions, use of mean heat capacity in heat calculations, problems involving sensible heat and latent heats, evaluation of enthalpy.Standard heat of reaction, heats of formation, combustion, solution, mixing etc., calculation of standard heat of reaction - Effect of pressure and temperature on heat of reaction -Energy balance for systems with and without chemical reaction - Unsteady state energy balances

UNIT V

Determination of Composition by Orsat analysis of products of combustion of solid, liquid and gas fuels - Calculation of excess air from orsat technique, problems on sulphur and sulphur burning compounds -Application of Process simulators in energy and material balance problems.

CH3352 FLUID MECHANICS FOR CHEMICAL ENGINEERS

OBJECTIVE:

• To acquire a sound knowledge on fluid properties, fluid statics, dynamic characteristics of fluid flow for through pipes and porous medium, flow measurement and fluid machineries

UNIT I

Methods of analysis and description - fluid as a continuum - Velocity and stress field - Newtonian and non-Newtonian fluids - Classification of fluid motion

UNIT II

Fluid statics – basic equation - equilibrium of fluid element – pressure variation in a static fluid - application to manometer – Differential analysis of fluid motion – continuity, equation of motions, Bernoulli equation and Navier- Stokes equation.

UNIT III

The principle of dimensional homogeneity – dimensional analysis, Rayleigh method and the Pitheorem - non-dimensional action of the basic equations - similitude - relationship between dimensional analysis and similitude - use of dimensional analysis for scale up studies

UNIT IV

Reynolds number regimes, internal flow - flow through pipes – pressure drop under laminar and turbulent flow conditions – major and minor losses; Line sizing; External flows - boundary layer concepts, boundary layer thickness under laminar and turbulent flow conditions- Flow over a sphere – friction and pressure drag - flow through fixed and fluidized beds.

UNIT V

Flow measurement - Constant and variable head meters; Velocity measurement techniques; Types, characteristics and sizing of valves; Classification, performance characteristics and sizing of pumps, compressors and fans

TOTAL: 45 PERIODS

L T P C 3 0 0 3

9

9

9

9

OUTCOMES:

- Understand the fundamental properties of fluids and its characteristics under static conditions.
- Develop empirical correlation using dimensionless analysis.
- Analyze flow of fluid through pipe and over the of solid,
- Understand and select flow meter(s), characteristics of pumps used in Chemical Process Industries

TEXT BOOKS:

- 1. Noel de Nevers, "Fluid Mechanics for Chemical Engineers ", Third Edition, McGraw-Hill, (2017).
- 2. McCabe W.L, Smith, J C and Harriot. P "Unit operations in Chemical Engineering", McGraw Hill, VII Edition, 2017

CH3303

CHEMICAL PROCESS INDUSTRIES

OBJECTIVE:

 To impart knowledge on various aspects of production engineering and make the student understand the practical methods of production in a chemical factory.

UNIT I SULFUR, SULFURIC ACID AND CEMENT

Sulfur, Raw materials Sources, Mining and production of Sulfur – Sulfuric acid, Methods of production of Sulfuric acid – Contact process – Chamber process. Cement – properties of Cement – Methods of production – Overall factors for Cement industry.

UNIT II FERTILIZER INDUSTRY

Major Components of Fertilizer industries – Nitrogen industries, ammonia, nitric acid, urea – Phosphorus industries, Phosphoric acid, Single Super Phosphate, DAP, MAP and NPK – Potassium chloride, Potassium Sulphate – Liquid Fertilizers – Bio Fertilizers.

UNIT III PULP, PAPER, SUGAR AND STARCH INDUSTRIES

Pulp – Methods of production – Comparison of pulping processes. Paper – types of paper products, Raw materials, Methods of production. Sugar – Methods of production – by products of the Sugar industry – Starch – Methods of production, Starch derivations.

UNIT IV PETROLEUM AND PETRO CHEMICAL INDUSTRIES

Petroleum – Chemical Composition, Classification of crude petroleum, Petroleum Refinery products – Petroleum Conversion processes – Pyrolysis and Cracking, Reforming Polymerization, isomerization and Alkylation – petrochemicals – methanol, chloro methanol, Acetylene and ethylene, Isopropanol, Acrylonitrile, Butadiane – Chemicals from Aromatics - Benzene, Toluene and Xylene.

UNIT V FUEL AND INDUSTRIAL GASES

Fuel Gases – Natural gas, Liquefied natural gas, Synthesis Gas – Industrial gases – Carbon dioxide, hydrogen, nitrogen and oxygen – Argon.

TOTAL: 45 PERIODS

0 0 3 1.5

OBJECTIVE:

The course is aimed to

Impart practical knowledge in operating IC engines and conduct experiments. To understand test procedures in testing material for engineering applications

LIST OF EXPERIMENTS

- 1. Port timing diagram
- 2. Valve timing diagram
- 3. Study of 2,4 stroke I C Engines
- 4. Load test on 4-stroke petrol engine
- 5. Performance test on 4-stroke single cylinder diesel engine
- 6. Performance test on 4-stroke twin cylinder diesel engine
- 7. Heat balance test on diesel engines
- 8. Tension test
- 9. Compression test
- 10. Deflection test
- 11. Hardness test (Rockwell and Brinell)
- 12. Spring test
- 13. Torsion test
- 14. Impact test

EQUIPMENTS REQUIRED

- 1. Single cylinder diesel engine coupled with Electrical loading
- 2. Single cylinder diesel engine coupled with Electrical loading with temperature indicators
- 3. Single cylinder slow speed diesel engine coupled with Mechanical loading
- 4. Twin cylinder diesel engine coupled with Electrical loading with Heat balance test setup
- 5. Single cylinder petrol engine coupled with Electrical loading
- 6. Two stroke IC Engine model
- 7. Four stroke IC Engine model
- 8. Small IC Engine models for study
- 9. UTM and Hardness test apparatus

*Minimum 10 experiments shall be offered Anna University, Polytechnic, Schools_{TOTAL}: 45 PERIODS

OUTCOMES:

On the completion of the course students are expected to

- CO1: Determine Brake power, Indicated power and frictional power of single cylinder diesel engines.
- CO2: Determine Brake power, Indicated power and frictional power of twin cylinder diesel engines.
- CO3: Determine Brake power, Indicated power and frictional power of single cylinder petrol engines.
- CO4: Evaluate the heat distribution from engine and preparing heat balance chart.
- CO5: Estimate the engine performance with mechanical loading
- CO6: Estimate the PTD and VTD of two and four stroke engines

CH3312 TECHNICAL ANALYSIS LABORATORY L T P C

0 0 3 1.5

OBJECTIVE

• To learn basic principles involved in estimation and characterization of industrially important materials.

- I. Soap Analysis
- a. Estimation of total fatty acid
- b. Estimation of percentage alkali content
- II. Oil Analysis
- a. Estimation of free acid
- b. Determination of Saponification value
- c. Determination of iodine value
- III. Cement Analysis
- a. Estimation of Silica content
- b. Estimation of mixed oxide content
- c. Estimation of calcium oxide content
- d. Estimation of calcium oxide by rapid method
- IV. Coal Analysis
- a. Estimation of Sulphur present in coal
- b. Ultimate analysis of coal
- c. Proximate analysis of coal
- V. Analysis of Bleaching Powder
- a. Estimation of available chlorine
- VI. Analysis of Glycerol
- Estimation of purity of glycerol
- VII. Analysis of fuels
- a. Flash point
- b. Fire point
- c. Cloud point
- d. Pour point
- e. Aniline point.

TRANSFORM TECHNIQUES

OBJECTIVES:

MA3451

- To acquaint the students with the concepts of vector calculus which naturally arises in many engineering problems.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To make the students appreciate the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.

UNIT I **VECTOR CALCULUS**

Gradient and directional derivative - Divergence and curl - Irrotational and solenoidal vector fields -Line integral over a plane curve - Surface integral - Area of a curved surface - Volume integral -Green's, Gauss divergence and Stoke's theorems – Verification and applications in evaluating line, surface and volume integrals.

FOURIER SERIES UNIT II

Dirichlet's conditions - General Fourier series - Odd and even functions - Half range sine series and cosine series - Root mean square value - Parseval's identity - Harmonic analysis.

FOURIER TRANSFORMS UNIT III

Statement of Fourier integral theorem-Fourier transform pair - Fourier sine and cosine transforms - Properties - Transforms of simple functions - Convolution theorem - Parseval's identity.

UNIT IV TRANSFORMS ACF

Existence conditions - Transforms of elementary functions - Transform of unit step function and unit impulse function – Basic properties – Shifting theorems -Transforms of derivatives and integrals – Initial and final value theorems - Inverse transforms - Convolution theorem - Transform of periodic functions - Application to solution of linear second order ordinary differential equations with constant coefficients.

UNIT V Z - TRANSFORMS AND DIFFERENCE EQUATIONS

Z-transforms - Elementary properties - Convergence of Z-transforms - - Initial and final value theorems - Inverse Z-transform using partial fraction and Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transforms.

OUTCOMES

Upon successful completion of the course, students should be able to:

- Calculate grad, div and curl and use Gauss, Stokes and Greens theorems to simplify calculations • of integrals.
- Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
- Understand the mathematical principles on Laplace transforms and would provide them the ability to formulate and solve some of the physical problems of engineering.
- Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

CH3451

MASS TRANSFER I

OBJECTIVE:

The course is aimed to

• Learn and determine mass transfer rates under laminar and turbulent conditions and apply these concepts in the design of humidification columns, dryers and crystallisers.

UNIT I MOLECULAR DIFFUSION 9 Introduction to mass transfer operations. Molecular diffusion in gases, liquids and solids. Diffusivity

measurement and prediction; multi-component diffusion.

UNIT II CONVECTIVE TRANSFER AND INTERPHASE MASS TRANSFER

Eddy diffusion, concept of mass transfer coefficients, theories of mass transfer, different transport analogies, application of correlations for mass transfer coefficients, inter phase mass transfer, relationship between individual and overall mass transfer coefficients. NTU and NTP concepts, Stage-wise and differential contractors.

UNIT III HUMIDIFICATION OPERATIONS

Humidification – Equilibrium, humidity chart, adiabatic and wet bulb temperatures; humidification operations; theory and design of cooling towers, dehumidifiers and humidifiers using enthalpy transfer unit concept.

UNIT IV DRYING

Drying – Equilibrium. Classification of dryers, batch drying – Mechanism and time of cross through circulation drying, theoretical estimation of drying rate and time. Continuous dryers – material and energy balance. Advance drying techniques such as freeze drying, microwave drying

UNIT V CRYSTALLIZATION

Crystal geometry. Equilibrium, yield and purity of products, theory of super saturation, nucleation and crystal growth, classification of crystallizers, design of batch crystallizers and continuous crystallizers.

L T P C 3 0 0 3

OUTCOMES:

On the completion of the course students are expected to

- CO1: Understand the fundamentals, types and mechanism of mass transfer operations
- CO2: Understand the theories of mass transfer and the concept of inter-phase mass transfer
- CO3: Understand the basics of humidification process and its application
- CO4: Understand the concept and mechanism of drying operations
- CO5: Understand the concept of crystallization process and identification of suitable crystallizer
- CO6: Formulate and solve material balances for unit operations such as humidification, drying and crystallization operations.

PC3352

OBJECTIVE

MECHANICAL OPERATIONS

- To impact knowledge in the field of particle size reduction and also deals with the detail construction and working of equipment's used for mechanical operations.

UNIT I PARTICLE CHARACTERIZATION AND MEASUREMENT

General characteristics of solids, different techniques of size analysis- Static - Image analysis and Dynamic analysis - Light scattering techniques, shape factor, surface area determination, estimation of particle size. Advanced particle size analysis techniques. Screening methods and equipment, screen efficiency, ideal and actual screens.

UNIT II PARTICLE SIZE REDUCTION AND SIZE ENLARGEMENT

Laws of size reduction, energy relationships in size reduction, methods of size reduction, classification of equipments, crushers, grinders, disintegrators for coarse, intermediate and fine grinding, power requirement, work index; Advanced size reduction techniques - Nano particle fabrication - Top-down approach - Bottom-up approach. Size enlargement - Importance of size enlargement, principle of granulation, briquetting, palletization, and flocculation. Fundamentals of particle generation.

UNIT III PARTICLE SEPARATION (GAS-SOLID AND LIQUID-SOLID SYSTEM)

Gravity settling, sedimentation, thickening, elutriation, double cone classifier, rake classifier, bowl classifier. Centrifugal separation - continuous centrifuges, super centrifuges, design of basket centrifuges; industrial dust removing equipment, cyclones and hydro cyclones, electrostatic and magnetic separators, heavy media separations, floatation, jigging

UNIT IV FILTRATION AND FILTRATION EQUIPMENTS

Theory of filtration, Batch and continuous filters, Flow through filter cake and filter media, compressible and incompressible filter cakes, filtration equipments - selection, operation and design of filters and optimum cycle of operation, filter aids.

binils app on Google Play Store Anna University, Polytechnic & School Android App

9

9

L T P C 3 0 0 3

9

UNIT V MIXING AND PARTICLE HANDLING

Mixing and agitation - Mixing of liquids (with or without solids), mixing of powders, selection of suitable mixers, power requirement for mixing. Storage and conveying of solids - Bunkers, silos, bins and hoppers, transportation of solids in bulk, Powder hazards, conveyer selection, different types of conveyers and their performance characteristics.

TOTAL: 45 PERIODS

9

OUTCOME:

• At the end of this course, the students will be able to understand the overview of equipment used to perform various mechanical operations and problems associated during the implementation and applications.

PROGRESS THROUGH KNOWLED GE

systems and processes, energy classifications, point and path functions, energy in transition work and heat. Zeroth law; temperature scales

binils.com

and their application to fluid flow, power generation and refrigeration processes.

Anna University, Polytechnic, Schools

Learn PVT behaviour of fluids, laws of thermodynamics, thermodynamic property relations

UNIT II

UNIT I

OBJECTIVE:

The course is aimed to

The first law of thermodynamics, statements of first law for the flow and non-flow processes. PVT behaviour of fluids; Mathematical representation of PVT behaviour; generalized compressibility factor correlation; generalized equations of state

Terminologies of thermodynamics, the variables and quantities of thermodynamics, characteristics of

UNIT III

Joule's experiment, energy balance for closed systems, mass and energy balance for open systems, Statements of the second law of thermodynamics, heat engine and refrigerator, Carnot cycle and Carnot theorems, thermodynamic temperature scale, entropy and its calculation, second law of thermodynamics for a control volume, Third law of thermodynamics, entropy from a microscopic point of view.

UNIT IV

Thermodynamic properties – internal energy, enthalpy, Helmholtz free energy, Gibbs free energy; thermodynamic property relations – Maxwell relations – partial derivatives and Jacobian method; residual properties; thermodynamic property tables and diagrams.

UNIT V

Thermodynamic aspects of compression, expansion processes and duct flow of compressible fluids,

OUTCOMES:

steam power plant

On the completion of the course students are expected to

- CO1: Understand the fundamental concepts of thermodynamics and its related functions
- CO2: Relate PVT behaviour of fluids and understand the real gas behavior
- CO3: Apply second law and analyse the feasibility of system/devices
- CO4: Analyse the thermodynamic property relations and their application to fluid flow
- CO5: Develop the significance of thermodynamic potentials and their use in the analysis of processes
- CO6: Formulate thermodynamic formulations and the working of compressors and expanders

9

5 PERIODS

OBJECTIVE:

CH3491

The course is aimed to

□ Teach the fundamental concepts of heat transfer viz., conduction, convection, radiation, boiling and condensation and its application to the students

UNIT I

Importance of heat transfer in Chemical Engineering operations - Modes of heat transfer ; One dimensional steady state heat conduction through plane and composite walls, hollow cylinder and spheres - Thermal conductivity measurement-effect of temperature on thermal conductivity; Heat transfer in extended surfaces; Transient heat conduction

UNIT II

Concepts of heat transfer by convection - Natural and forced convection, Hydrodynamic and thermal Boundary layers; analogies between transfer of momentum and heat - Reynold's analogy, Prandtl and Colburn analogy. Dimensional analysis in heat transfer, heat transfer coefficient for flow through a pipe, flow past flat plate.

UNIT III

Heat Exchangers – classification and design, overall and individual film coefficients, mean temperature difference, LMTD correction factor for multiple pass exchanger, NTU and efficiency of Heat exchangers

UNIT IV

Heat transfer to fluids with phase change - heat transfer from condensing vapours, drop wise and film wise condensation, Nusselt equation for vertical and horizontal tubes, condensation of superheated vapours, Heat transfer to boiling liquids - mechanism of boiling, nucleate boiling and film boiling

UNIT V

Evaporation- single and multiple effect operation, material and Energy balance in evaporators, boiling point elevation, Duhring's rule. Radiation heat transfer - Black body radiation, Emissivity, Stefan - Boltzman law, Plank's law, radiation between surfaces.

OUTCOMES:

On the completion of the course students are expected to

- CO1: To familiarize the students with the fundamental concepts of Heat Transfer. Provide the student with knowledge about heat transfer by conduction in solids for steady state
- CO2: Students will understand convective heat transfer and use of heat transfer coefficients for laminar and turbulent flows
- CO3: The course gives the student insight about boundary layer flow, laminar and turbulent flows
- CO4: Students will be able to calculate and use overall heat transfer coefficients in designing heat exchangers
- CO5: The course provides the student with knowledge about heat transfer with phase change (Boiling and condensation) and evaporation
- CO6: Students will understand radiative heat transfer including blackbody radiation and Kirchoff'slaw, and will be able to solve radiative problems apply knowledge of heat transfer to solve thermal engineering problems

ENVIRONMENTAL SCIENCES AND SUSTAINABILITY

UNIT I ENVIRONMENT AND BIODIVERSITY

Definition, scope and importance of environment – need for public awareness. Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ.

UNIT II ENVIRONMENTAL POLLUTION

Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollutions. Solid, Hazardous and E-Waste management. Case studies on Occupational Health and Safety Management system (OHASMS). Environmental protection, Environmental protection acts.

UNIT III RENEWABLE SOURCES OF ENERGY

Energy management and conservation, New Energy Sources: Need of new sources. Different types new energy sources. Applications of- Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy.

UNIT IV SUSTAINABILITY AND MANAGEMENT

Development, GDP, Sustainability- concept, needs and challenges-economic, social and aspects of sustainability-from unsustainability to sustainability-millennium development goals, and protocols-Sustainable Development Goals-targets, indicators and intervention areas Climate change- Global, Regional and local environmental issues and possible solutions-case studies. Concept of Carbon Credit, Carbon Footprint. Environmental management in industry-A case study.

UNIT V SUSTAINABILITY PRACTICES

Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycle assessment, Environmental Impact Assessment. Sustainable habitat: Green buildings, Green materials, Energy efficiency, Sustainable transports. Sustainable energy: Non-conventional Sources, Energy Cyclescarbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socioeconomical and technological change.

OBJECTIVE:

CH3411

To learn experimentally to calibrate flow meters, find pressure loss for fluid flows and determine pump characteristics.

1 No.

1 No

1 No

1 No.

1 No.

LIST OF EXPERIMENTS

- Viscosity measurement of non-Newtonian fluids 1.
- 2. Calibration of constant and variable head meters
- Calibration of weirs and notches 3.
- 4. Open drum orifice and draining time
- Flow through straight pipe 5.
- Flow through annular pipe 6.
- Flow through helical coil and spiral coil 7.
- Losses in pipe fittings and valves 8.
- Characteristic curves of pumps (Centrifugal / Gear / Reciprocating) 9.
- Pressure drop studies in packed column 10.
- Hydrodynamics of fluidized bed 11.
- 12. Drag coefficient of solid particle

*Minimum 10 experiments shall be offered

EQUIPMENT REQUIRED

- 1. Viscometer
- 2. Venturi meter
- 3. Orifice meter
- 4 Rotameter
- 5. Weir and Notches
- 6. Open drum with orifice
- Pipes and fittings 7.
- Helical and spiral coils 8.
- Centrifugal pump / Gear pump / Reciprocatin 9.
- Packed column 10.
- Fluidized bed 11.

Minimum 10 equipment

OUTCOMES:

- Use variable area flow meters and variable head flow meters
- Analyze the flow of fluids through closed conduits, open channels and flow past immersed bodies
- Select pumps for the transportation of fluids based on process conditions/requirements and fluid properties

TOTAL: 45 PERIODS

LTPC 0 3 1.5

OBJECTIVE:

The course is aimed to

Develop sound practical knowledge for students on different types of mechanical operations equipments.

LIST OF EXPERIMENTS*

- 1. Sieve analysis
- 2. Batch filtration studies using a Leaf filter
- 3. Batch filtration studies using a Plate and Frame Filter press
- 4. Characteristics of batch Sedimentation
- 5. Reduction ratio in Jaw Crusher
- Reduction ratio in Balomilis app on Google Play Store
 Separation characteristics of Polytechnic & School Android App

- binils.com
- Reduction ratio of Roll Crusher
 Separation characteristics versition Polytechnic, Schools
- 10. Reduction ratio of Drop weight crusher
- 11. Size separation using Sub-Sieving

EQUIPMENTS REQUIRED

- 1. Sieve shaker
- 2. Leaf filter
- 3. Plate and Frame Filter Press
- 4. Sedimentation Jar
- 5. Jaw Crusher
- 6. Ball Mill
- 7. Cyclone Separator
- 8. Roll Crusher
- 9. Elutriator
- 10. Drop Weight Crusher
- 11. Sieves.

*Minimum 10 experiments shall be offered

OUTCOMES:

On the completion of the course students are expected to

- CO1: Determine the size analysis in solid- solid separation systems
- CO2: Capability to select different solid fluid separation equipments.
- CO3: Evaluate the size reduction and various crushing parameters
- CO4: Estimate the separation characteristics
- CO5: Understand the technical methods related to unit operations in process plant
- CO6: Apply and understand fluid particle systems and equipment
